

**Immensely powerful.** The EVO amplifier lineup includes a 400 Watt stereo amplifier, a 400 Watt three channel amplifier, and 600 and 900 Watt monaural amplifiers.

All EVO amplifiers feature massive power supplies with the EVO-402 and EVO-600 equipped with a 5 kW power supply and the EVO-403 and EVO-900 housing 6 kW power supplies.

Active Cascode Topology™ eliminates global negative feedback. Only nested local feedback is employed around individual gain blocks, and the result is an extraordinarily open, liquid, effortless sound.

The signal path incorporates Krell Current Mode™ and Evolution CAST™ circuitry using proprietary multiple-output current mirrors in a complementary and balanced arrangement for extraordinary open-loop linearity.

EVO circuit topology breaks through bandwidth limitations of conventional designs resulting in near perfect performance in the audible range.

A complete EVO system, including a source, preamplifier, and amplifier, connected in Evolution CAST, reduces the number of voltage gain stages to the minimum: one. The resulting noise floor approaches the theoretical limit of technology.

The power supply makes use of extensive electrical and magnetic shielding to keep radiated interference out of critical amplifier circuits.

Internal high current line conditioning circuitry filters RF noise on the AC mains, as well as compensating for asymmetric power waveforms and DC on the mains.

The rails powering low level and gain stages of the amplifiers are regulated twice for total immunity from fluctuations in the AC mains and virtually noise-free output.

*All EVO Series products are available in silver and a luxurious black finish.*

*At right: The EVO-600 Monaural Power Amplifier and the EVO-402 Stereo Power Amplifier*

An advanced microprocessor monitors critical operational parameters.

Bias, load impedance, regulator output voltages, and operating temperature are all continuously monitored.

The new EVO amplifiers enjoy the hereditary advantage of Krell design and manufacture: from faceplate to binding posts, from military-grade circuit boards to the exquisite center panel with its diamond-cut finish first introduced in the Evolution One amplifier. Both internal and external detailing radiate the unmistakable quality that is uniquely Krell. In both concept and execution, this quality is the result of the unwavering,

focused determination that electronic circuits impose no sonic penalty while conveying a recorded event to the listener's ears. Realized in monaural, stereo, and three-channel configurations, the EVO amplifiers bring the engaging reproduction of music and movie soundtracks debuted in the flagship Evolution One to a potent new platform. With virtually unlimited power available, delivered through the most refined circuitry yet conceived, the EVO amplifiers strike the fine balance between pure visceral response and delicate articulation.

**Elegant, graceful, powerful — new from Krell, classic from Krell.**
